

Philasande Ngcamu

Full-Stack Software Developer · AI Automation Engineer

Soweto, Gauteng, South Africa · 083 492 9643 · philangcamu07@gmail.com · linkedin.com/in/philasande-ngcamu-282992207 · phila-ngcamu.com

SUMMARY

Full-stack software developer and AI automation engineer with 4+ years of hands-on experience, currently Software Architect & AI Engineer at Land and Sea Shipping (4PL logistics). Ship production web and mobile apps across the stack — TypeScript, Node.js, Next.js, React, React Native, Python, PostgreSQL/Supabase, Google Cloud. Build secure payment integrations (PayFast, PCI-DSS, webhook signature verification), AI agents on n8n with Claude and Gemini, and TMS / driver-facing mobile apps for logistics. Pursuing a BSc in Mathematics and Computer Science at UNISA.

SKILLS

Languages: TypeScript, JavaScript, Python, SQL

Frontend: React, React Native, Next.js, HTML, CSS, UI/UX implementation

Backend: Node.js, REST API design, OAuth2, webhooks, signature verification, concurrency & idempotency

Databases: PostgreSQL, Supabase, Microsoft Lists

Cloud & DevOps: Google Cloud Run, Microsoft Azure, Vercel, Git, CI/CD, Postman

AI & Automation: n8n, LLM integration (Gemini, Claude), prompt engineering, RAG, conversational AI flows, Jira automation

Payments & Compliance: PayFast gateway, IPN/webhook verification, PCI-DSS-aligned flows

Integrations: Shipping-line APIs (Maersk, MSC, CMA CGM, Hapag-Lloyd), Microsoft 365 (SharePoint, Lists, Power Automate), Google Analytics, WhatsApp Business API

Domain: International logistics & 4PL shipping, TMS / driver-app development

EXPERIENCE

Software Architect & AI Engineer — Land and Sea Shipping · Jan 2026 – Present

4PL international logistics & shipping · Roodepoort, Gauteng, ZA

- Lead architecture and delivery of AI automation and full-stack systems across logistics operations, integrating shipping-line APIs (Maersk, MSC, CMA CGM, Hapag-Lloyd) with internal tools.
- Designed and shipped a CRM lead-qualification engine on n8n that scores and routes inbound leads into Supabase and Microsoft Lists — cut sales-team manual data capture by ~60%, freeing the team to focus on relationship building.
- Built and deployed production WhatsApp chatbots and AI agents on n8n with Claude and Gemini for rate enquiries, booking, and tracking flows on the WhatsApp Business API.
- Architected REST APIs and integration services in Node.js and Python with OAuth2, webhook signature verification, and idempotency patterns; set engineering standards for schema design, Cloud Run deployment, and observability.
- Designed an internal ITSM system on Microsoft 365 (SharePoint, Lists, Power Automate) used daily by ops for ticketing and workflow.

Software Developer — Land and Sea Shipping · Aug 2025 – Jan 2026

- Supported and refined a PayFast payment gateway integration in a production Next.js application, ensuring signature verification and secure redirect flows aligned with PCI-DSS.
- Troubleshoot IPN (Instant Payment Notification) callbacks and improved payment-flow reliability through backend signature validation.
- Integrated Google Analytics across Land and Sea Shipping and Land and Sea Risk sites end-to-end — deployment, tagging, and reporting dashboards for marketing and operations.
- Built Jira automation using smart values, CRON triggers, and branching logic — reducing manual workload by ~30 minutes per week per project.

Junior Software Developer — Land and Sea Shipping · Jun 2024 – Aug 2025

- Contributed to Zipi TMS, building driver-facing mobile features in React Native for job tracking, milestone updates, proof-of-delivery uploads, status confirmations, and location-linked events.
- Translated design mockups into React/Next.js components with UX and marketing teams; shipped mobile and web apps across the stack with a UI/UX focus.
- Provided technical support for internal systems: domain setup, email delivery, site performance, Rocketseed configuration.

Full Stack Developer (Intern, then Trainee) — Umuzi.org · Nov 2021 – Mar 2024

- Built full-stack web applications with agile teams: project planning, code reviews, pair programming, and continuous learning.

PROJECTS

- CRM Lead-Qualification Engine — n8n workflow that converts and qualifies inbound leads into Supabase and Microsoft Lists; saved sales team ~60% on manual data capture. n8n, Supabase, Microsoft Lists, Node.js.
- Zipi TMS Driver App — React Native mobile app for drivers: job tracking, milestone updates, PoD uploads, status confirmations, location-linked events for dispute clarity. React Native, Node.js, Supabase, geolocation APIs.
- AI Customer Agents — Production WhatsApp agents (Claude, Gemini) for rate enquiries, booking, and shipment tracking, integrated with shipping-line APIs. n8n, Node.js, Cloud Run, Gemini API, WhatsApp Business API.
- Rate & Quote Automation — Multi-carrier rate-pulling pipeline aggregating shipping-line pricing, applying internal margin rules, delivering quotes via WhatsApp. n8n, Node.js, PostgreSQL, WhatsApp Business API.

EDUCATION

BSc Mathematics and Computer Science — University of South Africa (UNISA) · Jan 2025 – Dec 2027

National Certificate in IT: Systems Development — Umuzi.org · Nov 2021 – Oct 2022

CERTIFICATIONS

Google Cloud: Infrastructure & Application Modernization · Google Cloud: Exploring Data Transformation · Google: Introduction to Generative AI · Accenture Digital Skills: User Experience
